DETAILED ACTION

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: the essential difference is that the prior art Bergenek teaches collating feature vector data of a plurality of selected fingerprint images with feature vector data of stored fingerprint images by collating each of the selected fingerprint images *separately* (col. 12, lines 57-col. 13, line 57 and col. 16, lines 24-col. 17, line 7. Note that the fingerprint images that pass the quality check in 1204 are the selected fingerprint images that are collated). However, Bergenek does not disclose that the selected plurality of fingerprint images are collated concurrently, i.e., the "multiple candidate images are processed together" (Applicant's Remarks at pages 18-19). These features in combination with the other elements of the claim and the base claim are not disclosed or suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation of Pertinent Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Bolle et al. U.S. Patent No. 5,963,656 discloses a fingerprint identification system that determines the quality of fingerprint images.

b. Matsumoto et al. U.S. Patent Application Publication No. 2002/0181749 discloses a fingerprint identification system that sorts fingerprint images according to quality and collates the images in order to identify the fingerprint.
